ECO-CONNECT

Turning GraPARI Visits into Digital Value for Telkomsel

Team Doa Ibu · Team leader: Farel Putra Firmansyah · Members: [name], [name]

International Business Case Competition (IBCC) 2026 · FEB Universitas Airlangga

1. Problem: traffic grows, revenue per user does not

- Data traffic grows 18–25% a year; blended ARPU only moved Rp45,000 → Rp49,000 (Casebook, Exhibit A).
- Market share fell 46% → 44%.
- ~350 GraPARI outlets handle 12–18M walk-in visits a year, about Rp25,000 and 2.0–3.0 kg CO_2e each (Exhibits B–C).
- 55–65% of those transactions are technically eligible for self-service, yet visits persist.

Why: limited digital literacy, weak trust in remote identity checks for SIM replacement, and no reward for choosing digital.

2. Solution: ECO-CONNECT, three pillars

Pillar 1 · Veronika for everyone. Voice and WhatsApp flows in Bahasa Indonesia and regional languages. SIM replacement verified by a liveness check, then eSIM or courier.

Pillar 2 · Eco-Pass and CyberGuard. Each digital completion credits avoided emissions and Telkomsel Poin. CyberGuard (anti-scam, family protection) at Rp10,000 per month. Partner brands sponsor rewards.

Pillar 3 · GraPARI as an experience hub. Counters move to 24/7 kiosks. Staff become digital advisors for complex cases, seniors, and MSMEs.

3. Feasibility

- Veronika already runs on Azure OpenAI. Microsoft reports self-service completion rising 19% → 45%, and calls falling from about 8,000 to 1,000 per day (Microsoft Customer Stories, 2024).
- ECO-CONNECT reuses that stack and adds identity verification and a payment-linked reward engine.
- Dependencies: Dukcapil identity API, Core BSS/OSS for eSIM provisioning, kiosk hardware.
- Main technical risks: identity fraud, AI errors. Mitigations on slide 7.

4. Financials (IDR billion, 10% WACC)

Line item	Y0	Y1	Y2	Y3	Y5
Visits shifted (M)	–	1.8	4.0	5.7	7.1
GraPARI cost saved	–	40.5	91.2	131.8	162.2
CyberGuard VAS revenue	–	60.0	150.0	240.0	300.0
Partner revenue	–	15.0	25.0	35.0	45.0
CapEx and kiosks	(54.0)	–	(90.0)	(51.0)	(5.0)
Program and variable OpEx	–	(29.0)	(42.5)	(54.0)	(63.0)
Net cash flow	**(54.0)**	**86.5**	**133.7**	**301.8**	**439.2**

NPV Rp924 bn · IRR 222% · Payback 0.6 years.

5. Business viability: what drives the result

- Largest driver is paid conversion: 5% of 50M MAU by Year 5 is an assumption, not a case figure.
- With 60% of base adoption and 70% of base conversion, NPV is **Rp567 bn**. Still positive.
- Cost saving uses Rp25,000 walk-in vs Rp2,000 digital per interaction (team assumptions).
- Carbon: 2.5 kg vs 0.03 kg CO_2e per shifted visit (Exhibit C midpoints). **62,051 t CO_2e avoided over five years** (14,152 t in Year 3).

6. Collaboration and implementation fit

- **Digital squad:** MyTelkomsel and WhatsApp flows.
- **AI and network squad:** Azure OpenAI tuning, Core BSS/OSS integration.
- **Retail squad:** kiosk rollout, advisor training for GraPARI staff.
- **ESG function:** Scope 3 accounting and audit of the emission factors.
- **External:** Dukcapil (identity API), Microsoft (Azure OpenAI), partner brands (Eco-Pass rewards).

7. Execution roadmap and risks

- **Horizon 1 (M1–M6):** WhatsApp SIM replacement pilot, 30 kiosks in Jabodetabek.
- **Horizon 2 (M7–M18):** 200 more kiosks; Eco-Pass and CyberGuard launch nationally.
- **Horizon 3 (M19–M36):** counters converted to advisory hubs.

Risks: identity fraud (multi-factor liveness, SIM binding) · low adoption among older customers (assisted kiosks) · AI errors (guardrails, human handoff within 30 seconds) · churn if CyberGuard reads as a surcharge.

8. Closing and support needed

ECO-CONNECT turns routine service demand into paid digital value and avoided emissions.

Support needed from Telkomsel:

1. Executive sponsor across Digital and Retail.
2. Access to the identity API sandbox.
3. Year-1 budget of Rp54 bn.

Assumptions behind every figure are in the executive summary and the model (analysis/model.py).
